SEATS SOLD IN THE CHEAPEST WINDOW

1 · Re-time the revenue curve

Dynamic-pricing floor on the 129,271 under-priced far-out bookings instead of giving the seat away.

+ ₹1,378 / seat at a conservative 15% capture

2 · Kill the inefficient connections

Re-route 2+ stop traffic onto nonstop / single-connection metal — cheaper fare, lower fuel, lower carbon.

- 9.9 kg fuel & 31.3 kg CO₂ / seat

3 · Own the premium cabin

Protect and grow business class — the merged Tata group's profit engine — before low-cost rivals copy it.

8× revenue per premium seat vs economy

WHAT IT'S WORTH

₹780–1,550 cr / yr ≈ €90–

170M

A 2–4% revenue-management uplift on Air India's ₹38,812 cr (≈ €4.3B) FY24 revenue erases a **quarter to a third of the airline's ₹4,444 cr (≈ €490M) loss** — in one year, from pricing discipline alone — plus a structural cut in fuel and CO₂.

₹90 ≈ €1 · 1 crore = 10 million
